### **Taylor Machine Works, Inc. Introduces the Taylor RECYCLER Series Wheel Loaders**

Taylor Machine Works, Inc. is pleased to announce the release of the T-1025, RECYCLER Wheel Loader. For over 90 years, the Taylor name has become synonymous with purpose-built machines specifically designed to meet the needs of our customers. “We listened to the needs of those working in the recycling industry and made the decision to round out our fleet with the Taylor RECYCLER Wheel Loader series, to provide our customers one source for their heavy lifting equipment needs,” said Robert Taylor, President and Chief Operating Officer for the Taylor Group of Companies. This product has been designed to withstand the demanding conditions commonly found in the recycling industry.

This new model, like all Taylor products, is backed by Sudden Service, Inc. and their specially trained personnel along with our dedicated team of Authorized Taylor Dealers and direct factory store locations across the United States and abroad. Our goal is to provide high-quality products and immediate assistance to our customers through sales, rentals, service and support.

This heavy-duty Wheel Loader will provide increased operator safety, improved durability, while maintaining the same level of reliability found in all Taylor equipment. Designed with the needs of recycling facilities in mind, an extensive list of protective features is provided as standard attachments, with all Taylor RECYCLER Wheel Loaders. These items include cab window guarding, critical component protection, lighting guards, heavy-duty rear bumper, integral lift cylinder guards, hydraulic cylinder protective sleeves, steel fenders, hinged belly pan, a high lift Z-Bar linkage, and an attachment quick coupler, just to name a few. Additionally, optional attachments include buckets, forks and grapples, solid tire configurations, a payload weighing system, an advanced machine telematics system, heated air suspension seat and external mirrors, and a cab air precleaner system.

The Taylor T-1025 RECYCLER features a panoramic view cab and well-positioned lift arms, that optimize operator visibility and comfort, while allowing for a clear line of sight to the attachment. Key features such as Ride Control, Auto-Lube and air conditioning are all offered as standard equipment. Taylor Wheel Loaders are also equipped with Cummins Tier 4 Final engines and feature Auto-Idle speed control which optimizes engine speed and helps reduce fuel consumption. With a full turn tipping load of 25,354-lbs, max hinge pin height of 182 inches and a max dump reach of almost 4 feet, the T-1025 RECYCLER navigates loading and clean-up duties with ease.

Taylor RECYCLER Wheel Loaders are an exciting new addition to our robust lineup of mobile equipment, and we look forward to further serving the recycling industry. Our customers can depend on our machines to be more versatile, efficient, and able to tackle the demands of tomorrow. Our past growth is an inspiration for our future and Taylor will continue to build with Faith, Vision, and Work.
